Notes:

(1) The number of English as a Second Language (ESL) students dropped between 1998/99 and 1999/00 because of a change in funding policy. Starting in 1999/00, public school ESL students were funded in the supplemental ESL funding category up to a maximum of 5 years. Previous to this, there was no maximum. Funding for ESL services for independent school students is included in the regular operation grants issued to independent schools.

Notes:

(1) Distributed Learning is a method of instruction that relies primarily on indirect communication between students and teachers, including internet or other electronic-based delivery, teleconferencing, or correspondence.

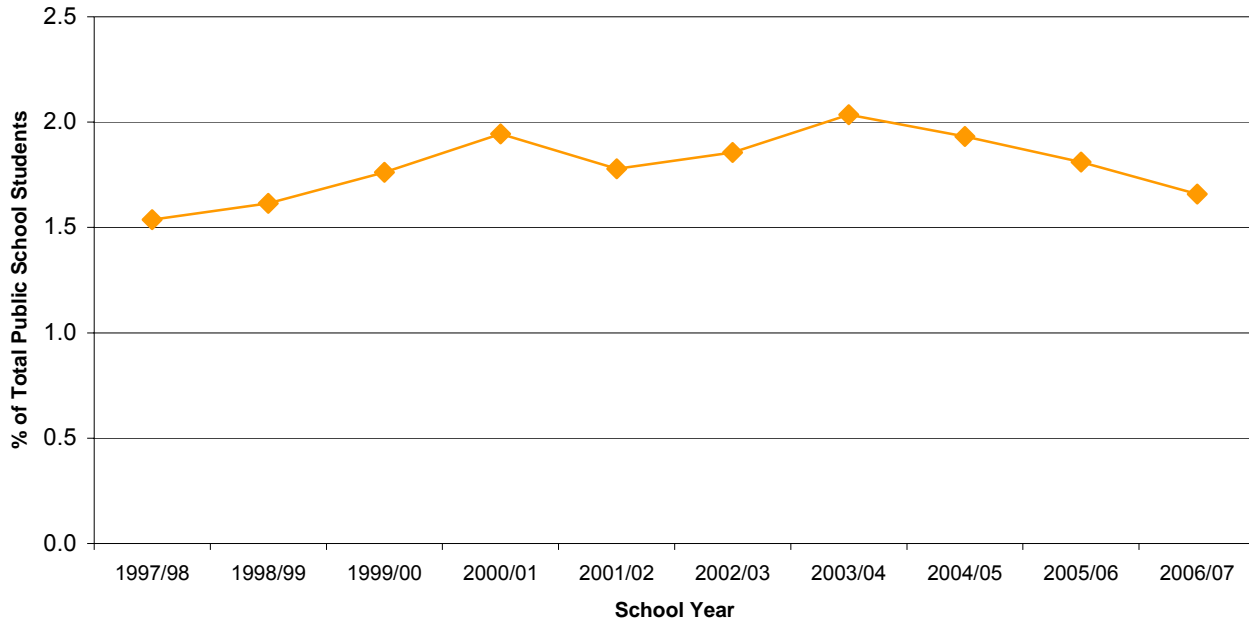

(2) Prior to 2006, Distance Education Programs were provided, directed, and assessed by a district or by a regional Distance Education School in which instruction is offered primarily through one or more of the following: (a) telecommunications medium; or (b) other electronic mediums of communications.

(3) There are an additional 2,340 enrolments in Grades 10, 11 and 12 that are also reported in other programs/schools. In 2006/07, changes in Distributed Learning legislation permitted cross-enrolment in Grades 10, 11 and 12.

Notes:

- (1) PISA is administered every three years.
- (2) Students proficient at Level 3 can execute clearly described procedures, including those that require sequential decisions. They can select and apply simple problem-solving strategies. Students at this level can interpret and use representations based on different information sources and reason directly from them. They can develop short communications reporting their interpretations, results, and reasoning.
- (3) Students proficient at Level 4 can work effectively with explicit models for complex concrete situations that may involve constraints or call for making assumptions. They can select and integrate different representations, including symbolic ones, linking them directly to aspects of real-world situations. Students at this level can utilise well-developed skills and reason flexibly, with some insight, in these contexts. They can construct and communicate explanations and arguments based on their interpretations, arguments, and actions.
- (4) Students proficient at Level 5 can develop and work with models for complex situations, identifying constraints and specifying assumptions. They can select, compare, and evaluate appropriate problem solving strategies for dealing with complex problems related to these models. Students at this level can work strategically using broad, well-developed thinking and reasoning skills, appropriate linked representations, symbolic and formal characterisations, and insight pertaining to these situations. They can reflect on their actions and formulate and communicate their interpretations and reasoning.
- (5) Students proficient at Level 6 can conceptualise, generalise, and utilise information based on their investigations, and modelling of complex problem situations. They can link different information sources and representations and flexibly translate among them. Students at this level are capable of advanced mathematical thinking and reasoning. These students can apply this insight and understanding along with a mastery of symbolic and formal mathematical operations and relationships to develop new approaches and strategies for attacking novel situations. Students at this level can formulate and precisely communicate their actions and reflections regarding their findings, interpretations, arguments, and the appropriateness of these to the original situations.
