# BUILDING BLOCKS FOR ECONOMIC DEVELOPMENT & ANALYSIS

## PREFACE

---

### PURPOSE

Building Blocks have been conceived and developed by the Economic Development Branch of the Ministry of Sustainable Resource Management, under the guidance of Nancy South, Manager Economic Analysis, as an analytical tool that supports British Columbia coastal and land and resource use planning and decision-making and economic development initiatives. The Blocks contain concise business and sector information for a broad range of resource-based business types in BC. At this point, there are more than 30 Blocks either complete or in draft form. Several more Blocks have been identified as high priority by planning tables and other client groups. Additional Building Blocks will be developed over time, and some Blocks may be updated. For the most current Building Blocks, please see the Ministry of Sustainable Resource Management website, at: <http://srmwww.gov.bc.ca/rmd/ecdev/>

### ACKNOWLEDGEMENTS

Generous support in terms of both funding and staff time has been provided by the Ministries of Energy and Mines; Water, Land and Air Protection; Agriculture, Food and Fish; and Forests, as well as by Skeena and Coast Regions of the Ministry of Sustainable Resource Management.

### BENEFITS

Building Blocks are expected to provide the following general benefits:

- Increase efficiency and more informed decision-making by providing readily accessible, credible information to planning and economic development processes;
- Improve the consistency of economic information across planning areas;
- Support economic analysis and decision-making that occurs outside formal coastal and land use planning processes; and
- Provide linkages between economic analysis and other social and environmental analytical tools (through identifying resource requirements to support economic activities and general compatibilities with other sectors and values).

### LIMITATIONS

Every effort has been made to ensure that the information contained in Building Blocks is accurate and consistent. Approved, credible data sources are the foundation for Building Blocks. All Blocks were reviewed by sponsoring agencies and other experts. However, users are cautioned that information is used at their own risk, and that the authors and sponsors are not liable for any damages. Any conclusions or interpretations by the authors are not intended to represent government policy. Also, note that Building Blocks do not provide site specific information nor do they consider requirements for sustainability (social, community, environmental).

### COPYRIGHT/REFERENCE

These Building Blocks are copyright to the Government of British Columbia, Ministry of Sustainable Resource Management, Economic Development Branch. See <http://www.gov.bc.ca/com/copy/> for information regarding the copyright and to request permission to reproduce the Building Block documents.

### RECOMMENDED REFERENCE/CITATION

## 1.0 EXHIBIT 1: FRESHWATER ANGLING IN BC 2000/01 — A PRELIMINARY SECTOR OVERVIEW

### 1.1 Overview

- 335,269 licenced freshwater anglers in BC in 2000/01 (303,729 active anglers).
- 4,402,000 angler-days of activity by licenced anglers in 2000/01 (plus 414,000 angler-days by 74,900 juveniles under 16 years of age); anglers under 16 do not need a licence.
- Angling occurs throughout the year but 2/3 of activity takes place in the four summer months June through September.
- The BC Wildlife Federation is a long-serving conservation organization in British Columbia.
- Other organizations that are dedicated to fish conservation and that promote stewardship of the resource include: BC Federation of Drift Fishers, BC Federation of Fly Fishers, Trout Unlimited Canada – British Columbia, British Columbia Fishing Resorts and Outfitters Association, and Guide Outfitters Association of British Columbia.

### 1.2 Resources

- BC offers a diversity of sport fishing experiences:
  - 216,846 lakes,
  - 789,363 km of streams,
  - 24 popular species of sport fish.
- Anglers need access to healthy fish populations in a natural setting.
- Angling takes place throughout the province which is divided into 9 resource management regions: Vancouver Island, Lower Mainland, Thompson-Nicola, Kootenay, Cariboo-Chilcotin, Skeena, Omineca, Peace and Okanagan (no one region has more than 20% of total provincial angling activity).
- The Skeena Watershed is a particularly valuable angling region. The Skeena Watershed represents one of the last major Pacific drainages where record size chinook and wild summer run steelhead can be found. The Watershed is unique in the diversity of species available, the large size of fish, the fly fishing opportunities, and its pristine wilderness setting.
- Trout is the main species of interest and catch.
- Fish harvested in 2000/01 – 1.35 million rainbow trout, 0.15 million cutthroat trout, 0.17 million other trout, 0.01 million steelhead, 0.05 million Dolly Varden, 0.45 million kokanee, 0.19 million salmon and 0.17 million other fish.
- Most steelhead fishing is “catch and release” fishing (and “catch and release” is common for many other species as well).

### 1.3 Products

- Angling is a form of outdoor recreational activity.
- Angling occurs from shore, beach, pier or boat, and anglers use lures, bait, flies, and set lines as gear.
- Three main components of the angling activity are:
  - catching fish – regardless of whether the fish is harvested or kept,
  - harvesting fish – for those anglers who are allowed to choose to do so,
  - aesthetic experience – derived from the natural environment.
- In view of these distinct components, angling activity is measured not in units of fish caught or harvested, but in “angler days” defined as one angler fishing for part of a single day.
- Two broad types of angling experiences exist:
  - independent anglers – pursue their own fishery experience and assume responsibility for their fishing gear, boat and fuel (if required), accommodation, meals and transportation,
  - guided/lodge anglers – hire a third party to package one or more of accommodation, meals, guiding services, boat, equipment and transportation to facilitate the angling experience.
- In 2001/02 there were 63,600 guided angler days or 1.4% of the total 4.4 million angler-days.

### 1.4 Market

- General angler profile (DFO, “2000 Freshwater Angling Survey”):
  - licenced angler residence: 78% BC, 9% Rest of Canada, 13% outside Canada,
  - average age is mid 40s,
  - 79% male,
  - average of 19 years fishing experience in BC,
  - on average, anglers from outside BC have higher household income than anglers from BC.

### 1.5 Regulatory Regime

- Management responsibility for freshwater or non-tidal angling in BC has been delegated to the provincial government by the federal government (the exception is non-tidal angling for anadromous salmon, excluding steelhead, that is managed by DFO).
- Anglers fishing in freshwater are licenced under the authority of the BC *Wildlife Act* (all anglers 16 years of age or older and fishing in freshwater require a licence).
- The Ministry of Water, Land and Air Protection (MWLAP) is responsible for all licences and permits issued under the BC *Wildlife Act* and its regulations (the Ministry provides yearly a summary titled “Freshwater Angling Regulations Synopsis”).

## Building Blocks for Economic Analysis

- Anglers must:
  - have a valid fishing licence,
  - abide by restrictions on allowable gear,
  - obey minimum or maximum size limits on fish that they catch and keep,
  - observe fishing seasons,
  - adhere to water-specific closures,
  - observe restrictions on bag limits of fish that they can catch.
- Conservation Surcharge stamps are supplementary licences required to fish for steelhead, or retaining salmon or specific stocks of trout or char.
- A Classified Waters licence is required to fish on specific waters.

### 1.6 Classified Waters

- The Province introduced in 1990/91 a new Classified Waters management system. The purpose was threefold:
  - to provide a diversity of angling opportunities,
  - to maintain quality angling,
  - to improve regulation of the angling guide industry.
- Under the system, 42 highly productive trout and steelhead streams have been designated as classified waters (7 Class 1, 35 Class 2).
- These classified waters require an additional licence and management capacity to limit angler activity and angling guides.
- Class 1 waters are remote, pristine, wilderness waterbodies with significant fisheries values which are largely accessible only by boat or aircraft.
- Class 2 waters are more accessible but still offer quality fishing experiences.

### 1.7 Conservation

- The Habitat Conservation Trust Fund is directly supported by surcharges on hunting and fishing licences. Since 1981, the BC Habitat Conservation Trust Fund has invested \$48 million in wildlife and fisheries conservation programs in BC.
- Affiliated with the BC Wildlife Federation, the BC Conservation Foundation administers, implements and delivers a wide variety of conservation related projects.

## Building Blocks for Economic Analysis

### 1.8 Capacity for Growth

- There has been a significant decline in activity and expenditures in recent years:

	<b>Angler-Days</b>	<b>Total Expenditures</b>
1985	5.7 million	\$303 million
1990	5.3 million	\$468 million
1995	6.3 million	\$494 million
2000	4.4 million	\$402 million

- Potential reasons behind the decline include:
  - competition from other activities such as golfing, skiing/snowboarding and nature observation,
  - increased costs,
  - decline in fish populations in certain areas,
  - increasing complexity and restrictiveness of provincial angling regulations,
  - demographics including increasing population age and urbanization.
- Potential growth areas include: fly fishing experiences, experiences catering to women and family groups, high alpine fishing, experiences combining fishing and non-fishing activities (e.g. nature observation, adventure travel, golfing).

### 1.9 Government Revenues

- Basic licence fees:
  - annual (\$30 BC resident, \$40 other Canadian, \$55 non-Canadian),
  - one day (\$8 BC resident, \$15 other),
  - eight day (\$17 BC resident, \$25 other Canadian, \$30 non-Canadian),
  - annual licence fee for disabled (\$1 BC resident, others not eligible),
  - annual licence for age 65 plus (\$5 BC resident, others not eligible).
- Conservation Surcharges:
  - steelhead (\$15 BC resident, \$40 other),
  - salmon (\$10 BC resident, \$20 other),
  - Kootenay Lake rainbow trout (\$10 BC resident, \$20 other),
  - Shuswap Lake rainbow trout (\$5 BC resident, \$10 other),
  - Shuswap Lake char (\$5 BC resident, \$10 other).
- Classified Waters licence fees:
  - annual (\$10 resident, others not eligible),
  - Class 1 Waters (\$20/day for non-residents of BC),
  - Class 2 Waters (\$10/day for non-residents of BC).

## 2.0 EXHIBIT 2: FRESHWATER ANGLING IN BC 2000 – A PRELIMINARY ECONOMIC PROFILE
