BUILDING BLOCKS FOR ECONOMIC DEVELOPMENT & ANALYSIS

PREFACE

PURPOSE

Building Blocks have been conceived and developed by the Economic Development Branch of the Ministry of Sustainable Resource Management, under the guidance of Nancy South, Manager Economic Analysis, as an analytical tool that supports British Columbia coastal and land and resource use planning and decision-making and economic development initiatives. The Blocks contain concise business and sector information for a broad range of resource-based business types in BC. At this point, there are more than 30 Blocks either complete or in draft form. Several more Blocks have been identified as high priority by planning tables and other client groups. Additional Building Blocks will be developed over time, and some Blocks may be updated. For the most current Building Blocks, please see the Ministry of Sustainable Resource Management website, at: <http://srmwww.gov.bc.ca/rmd/ecdev/>

ACKNOWLEDGEMENTS

Generous support in terms of both funding and staff time has been provided by the Ministries of Energy and Mines; Water, Land and Air Protection; Agriculture, Food and Fish; and Forests, as well as by Skeena and Coast Regions of the Ministry of Sustainable Resource Management.

BENEFITS

Building Blocks are expected to provide the following general benefits:

- Increase efficiency and more informed decision-making by providing readily accessible, credible information to planning and economic development processes;
- Improve the consistency of economic information across planning areas;
- Support economic analysis and decision-making that occurs outside formal coastal and land use planning processes; and
- Provide linkages between economic analysis and other social and environmental analytical tools (through identifying resource requirements to support economic activities and general compatibilities with other sectors and values).

LIMITATIONS

Every effort has been made to ensure that the information contained in Building Blocks is accurate and consistent. Approved, credible data sources are the foundation for Building Blocks. All Blocks were reviewed by sponsoring agencies and other experts. However, users are cautioned that information is used at their own risk, and that the authors and sponsors are not liable for any damages. Any conclusions or interpretations by the authors are not intended to represent government policy. Also, note that Building Blocks do not provide site specific information nor do they consider requirements for sustainability (social, community, environmental).

COPYRIGHT/REFERENCE

These Building Blocks are copyright to the Government of British Columbia, Ministry of Sustainable Resource Management, Economic Development Branch. See <http://www.gov.bc.ca/com/copy/> for information regarding the copyright and to request permission to reproduce the Building Block documents.

1.0 EXHIBIT 1: SALTWATER ANGLING IN BC 2002 — A PRELIMINARY SECTOR OVERVIEW

1.1 Overview

- 311,200 licensed saltwater anglers in BC in 2002.
- An estimated 2,100,000 angler days by licensed anglers in 2002 (1,650,000 angler-days by boat anglers and 450,000 angler days by shore, pier, and other non-boat anglers).
- Angling occurs throughout the year but 2/3 of activity takes place in the four summer months June through September.

1.2 Resources

- BC offers a diversity of sport fishing experiences over its extensive coastline.
- Anglers need access to healthy fish populations in a natural setting.
- Salmon (especially chinook), halibut, and rockfish are the main species of interest.
- Fish harvested in 2000 according to DFO mail survey of anglers – 0.48 million salmon (including 0.24 million chinook), 0.11 million halibut, 0.41 million rockfish, 0.10 million lingcod, 1.4 million shellfish (crabs, clams, oysters, shrimp/prawns, other).

1.3 Products

- Angling is a form of outdoor recreational activity.
- Angling occurs from shore, beach, pier or boat, and anglers use lures, bait, and flies.
- Three main components of the angling activity are:
 - Catching fish – regardless of whether the fish is harvested or kept,
 - Harvesting fish – for those anglers who are allowed to choose to do so,
 - Aesthetic experience – derived from the natural environment.
- In view of these distinct components, angling activity is measured not in units of fish caught or harvested, but in “angler days” defined as one angler fishing for any part of a single day.
- Three broad types of angling experiences exist:
 - lodges – typically offer all-inclusive packages comprising accommodation, meals, boat and fuel, fishing equipment, and sometimes a fishing guide who navigates and assists in catching fish. Lodge packages are often three to five days in duration,
 - charters – are angling packages that include boat, equipment, and guide, but no accommodation or meals. Charter packages generally last for one day or a half-day. There are however charter operations that in concert with accommodation facilities offer two to five day packages,
 - independent anglers – are responsible for their own fishing gear, boat and fuel, accommodation, meals, and transportation.
- In 2002 there were 2.1 million angler-days – 1.8 million independent angling days, 0.1 million charter angling days, and 0.2 million lodge angling days.

Building Blocks for Economic Analysis

1.4 Markets

- General angler profile (DFO, “2000 Tidal Angling Survey”).
 - licensed angler residence: 64% BC, 13% Rest of Canada, 23% outside Canada,
 - average age is late 30s,
 - 80% male,
 - average of 10 years fishing experience in BC.
- On average, anglers from outside BC have higher household income than anglers from BC.

1.5 Regulatory Regime

- Canada Department of Fisheries and Oceans (DFO) has responsibility for licensing and regulation of saltwater angling in BC.
- All anglers must be licensed, pay fees, and observe catch limits (daily, possession, and in some cases annual), seasons, fishing area and gear, and other restrictions.
- Anglers 16 years and older pay licence fees (including GST) of:

	Residents of Canada	Non-Residents
Annual	\$22.47	108.07
1 day	5.62	7.49
3 day	11.77	20.33
5 day	17.12	34.17

- A Salmon Conservation Stamp (\$6.42 including GST) must be affixed to licences held by anglers wishing to retain salmon.
- Only barbless hooks can be used when fishing for salmon.
- Chinook limits are 2 daily, 4 possession, and an annual possession limit varying from 15 to 30 depending on the area. The combined catch limit of all salmon is 4 daily, 8 possession. Coho restrictions apply to many areas, e.g., retention only of hatchery fin-clipped coho.
- Halibut limits coastwide are 2 daily, 3 possession.
- There are special rockfish protection areas and limits.
- In 1999, DFO gave the recreational sector priority access over the commercial sector to chinook and coho salmon and gave the commercial sector priority.
- Access to sockeye, pink, and chum salmon.
- The Province does not license saltwater fishing lodges or charters/guides.

1.6 Capacity for Growth

- There was a decline in activity and expenditures in the late 1990s followed by a slight rebound since 1999.
- The major reason behind the decline were the late announcement of fishing regulations, reduced bag limits in some areas, and area closures (all tied to conservation concerns for chinook and coho salmon).
- Other potential reasons behind the decline include:
 - Competition from other activities such as golfing, ecotourism, and nature observation
 - Increased costs
 - Demographics including increasing population age and urbanisation
- Potential growth areas include: shore fishing fly fishing experiences, experiences catering to women and family groups, high alpine fishing, experiences combining fishing and non-fishing activities (e.g. nature observation, adventure travel, golfing).
- Shore fishing growth tied to public infrastructure development, e.g., public boat ramps, enhancement-based fisheries.

1.7 Provincial Government Revenues

- Licence fees accrue to the federal government so there are no direct provincial revenues.

1.8 Input Output Impacts

- Estimated direct impacts of saltwater angling activity in 2002 were:
 - \$550 million in angler expenditures,
 - \$120 million in wages and benefits paid,
 - 3,590 person-years (PYs) of employment generated.
- Indirect (supplier-related) and induced (consumer re-spending) impacts add 50% to 100% to the direct impacts above.
