

Consumer Price Index ♦ July 2012

Consumer Price Index (2002=100)

Highlights

- Inflation in British Columbia eased to 1.1% in July, following a 1.5% increase in consumer prices during the previous month. Energy prices climbed 1.8% as a sharp decrease (-7.6%) in the average cost of natural gas was offset by higher prices for electricity (+5.7%) and gasoline (+2.3%). Minus these higher energy costs and a 2.3% increase in the price of food, the consumer price index for B.C. rose just 0.8% in July.

Total food costs increased 2.3% with the increase in grocery bills (+2.4%) slightly outpacing the rise in the price of restaurant meals (+2.2%). Overall shelter costs, however, edged lower (-0.7%) in July, mainly as a result of lower mortgage carrying costs and homeowner replacement costs (-3.5%). Prices related to household operations (+3.0%) and furnishings (+3.2%) continued to climb, while clothing & footwear costs jumped 5.0%.

Transportation costs were up 2.2%, driven by higher automobile insurance premiums (+5.2%) and price hikes at the pump (+2.3%). Purchasing or leasing a passenger vehicle was also slightly more expensive (+1.5%). Health & personal care (+0.6%) and alcohol & tobacco (+0.4%) prices advanced slightly, while those for recreation, education & reading materials (-0.2%) edged lower.

- Nationally, consumer prices rose 1.3% in July. Core inflation, as defined by the Bank of Canada, rose 1.7%, down from a 2.0% increase a month earlier.

Ontario (+0.7%), New Brunswick (+0.9%), Alberta (+0.9%) and B.C. (+1.1%) all recorded inflation rates below the national average. Manitoba (+1.8%) and Saskatchewan (+1.7%) posted the largest increases in consumer prices.

Note: Statistics Canada will release the August Consumer Price Index on September 21, 2012.

BC and Canada Inflation Trend

(% change, same month of previous year)

2002=100	Latest 12-month Average Index (ending in July 2012)	Latest 12-month Average % Change	2011 Annual Average % Change
Canada	121.2	2.3	2.9
BC	117.5	1.8	2.4
Vancouver	118.7	1.9	2.3
Victoria	116.5	1.6	2.1

¹The Core CPI for Canada: Defined by the Bank of Canada as the All-items index excluding the eight most volatile components (fruit, vegetables, gasoline, fuel oil, natural gas, mortgage interest, inter-city transportation and tobacco products). Also excluded is the effect of changes in indirect taxes on the remaining components.

Consumer Price Index—Terms and Definitions

Base Effect

The 12-month variation in the CPI is calculated by comparing the current month's index with the index for the same month of the previous year. The 12-month change is represented by the difference in the indexes of the reference months. Thus, the 12-month variation can decrease from one month to the next merely because the base serving as the point of comparison increased.

Source: Statistics Canada

Twelve-Month Percent Changes

Also referred to as “year-over-year”, twelve-month percent changes compare indexes for a given month to indexes for the same month of the previous year. As they compare two points in time, they are influenced by unusual or temporary events that can affect either of the two months. Their calculation does not include any of the intervening monthly indexes.

Source: Statistics Canada

Annual Average Index

Annual average indexes are calculated by averaging index levels over the 12 months of the calendar year. These data should not be confused with the 12-month change in the CPI. By the nature of the calculation, averaging

indexes over the calendar year gives a better representation of price behaviour over the whole year and is closer to the concept of an average price. The use of annual averages is considered the preferred option for indexation purposes.

Source: Statistics Canada

Latest Twelve-Month Average Index

The latest twelve-month average index (ending in the current month) is a 12-month moving average of the indexes of the most recent 12 months. It is calculated like the annual average index. Hence, in theory, the December twelve-month average index would be equal to the annual average index for the calendar year. However, in practice, when BC Stats makes these calculations from published data, the December 12-month average index may differ from Statistics Canada's published annual average index due to rounding.

Harmonized Sales Tax

On July 1, 2010, the Harmonized Sales Tax (HST) came into effect in British Columbia and Ontario. As well, Nova Scotia increased its HST by two percentage points.
