Consumer Price Index ◆ September 2012

Consumer Price Index (2002=100) **Highlights**

• British Columbia's year-over-year inflation rate was among the lowest in the country in September, edging down to 0.7%. The cost of which typically fluctuates energy, substantially, was unchanged (-0.0%) from September 2011.

Lower fuel prices helped moderate an in-crease to transportation (+0.5%) costs, as drivers paid 0.8% less to fill up their tanks. The cost of purchasing an automobile also fell (-0.3%), but consumers paid more to maintain (+3.1%) and to insure (+5.2%) a vehicle. Despite higher costs for fuel oil (+3.7%), electricity (+5.7%) and water (+6.3%), BC residents paid 0.5% less for shelter than in September of last year. Overall costs for accommodation were up 1.5% for renters, but were 1.6% lower for home owners.

Consumers in BC faced higher prices for most types of goods in September. Food prices rose 1.4%, reflecting increases in the cost of food purchased from stores (+1.0%) as well as restaurant meals (+2.2%). Students started the school year with a 2.3% increase in tuition costs. Clothing & footwear (+3.1%) prices were also up, but costs for health and personal care (-0.5%) were lower than in the same month in 2011.

The inflation rate in Vancouver (+0.8%) was a touch higher than the provincial average, while Victoria's (+0.5%) rate was moderately

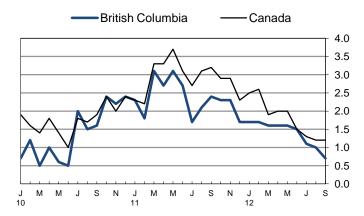

• Nationally, increases in energy (+2.9%) and food (+1.6%) fuelled the inflation rate in September (+1.2%). BC and Ontario (each +0.7%) were the only provinces where price increases were lower than the Canadian average. PEI's inflation rate (+2.0%) was the highest in the country.

Note: Statistics Canada will release the October Consumer Price Index on November 23, 2012.

¹The Core CPI for Canada: Defined by the Bank of Canada as the Allitems index excluding the eight most volatile components (fruit, vegetables, gasoline, fuel oil, natural gas, mortgage interest, inter-city transportation and tobacco products). Also excluded is the effect of changes in indirect taxes on the remaining components.

Consumer Price Index—Terms and Definitions

Base Effect

The 12-month variation in the CPI is calculated by comparing the current month's index with the index for the same month of the previous year. The 12-month change is represented by the difference in the indexes of the reference months. Thus, the 12-month variation can decrease from one month to the next merely because the base serving as the point of comparison increased.

Source: Statistics Canada

Twelve-Month Percent Changes

Also referred to as "year-over-year", twelvemonth percent changes compare indexes for a given month to indexes for the same month of the previous year. As they compare two points in time, they are influenced by unusual or temporary events that can affect either of the two months. Their calculation does not include any of the intervening monthly indexes.

Source: Statistics Canada

Annual Average Index

Annual average indexes are calculated by averaging index levels over the 12 months of the calendar year. These data should not be confused with the 12-month change in the CPI. By the nature of the calculation, averaging

indexes over the calendar year gives a better representation of price behaviour over the whole year and is closer to the concept of an average price. The use of annual averages is considered the preferred option for indexation purposes.

Source: Statistics Canada

Latest Twelve-Month Average Index

The latest twelve-month average index (ending in the current month) is a 12-month moving average of the indexes of the most recent 12 months. It is calculated like the annual average index. Hence, in theory, the December twelve-month average index would be equal to the annual average index for the calendar year. However, in practice, when BC Stats makes these calculations from published data, the December 12-month average index may differ from Statistics Canada's published annual average index due to rounding.

Harmonized Sales Tax

On July 1, 2010, the Harmonized Sales Tax (HST) came into effect in British Columbia and Ontario. As well, Nova Scotia increased its HST by two percentage points.
