

Consumer Price Index ♦ October 2012

Consumer Price Index (2002=100)

Highlights

- Consumer prices in British Columbia rose 0.5% in October compared to the same month a year earlier. Energy prices rose moderately (+1.1%) as the cost of natural gas fell (-4.0%) and prices for gasoline (+0.3%) and fuel oil (+0.5%) increased only slightly.

Food prices climbed 1.9% in October, primarily due to a 2.0% increase in the cost of restaurant meals. Grocery bills were also higher (+1.9%), led by a jump in prices for fruit (+5.9%), seafood (+3.7%), and meat (+2.4%).

Overall, shelter costs (-0.3%) slid lower for a fifth straight month, largely due to lower mortgage carrying costs. Rent (+1.5%), utilities bills (+2.4%), property taxes (+3.5%), and homeowner maintenance costs (+4.9%) increased. Household operations & furnishings (+1.3%) were slightly more expensive in October, while prices on clothing and footwear (-0.9%) inched lower.

Transportation costs climbed 1.1% with a substantial increase in auto insurance premiums (+5.2%) and maintenance (+3.1%) responsible for much of the increase.

Prices for health & personal care services edged down 0.2%, while those for recreation, education & reading materials inched ahead (+0.4%). Alcohol & tobacco products were also up slightly (+0.6%) compared to the previous year.

- Nationally, consumer prices rose 1.2% in October, with the largest increases recorded in Newfoundland & Labrador (+2.2%) and P.E.I. (+2.1%). B.C. (+0.5%) and Alberta (+0.6%) posted the lowest inflation rates among the provinces.

Note: Statistics Canada will release the November Consumer Price Index on December 21, 2012.

¹The Core CPI for Canada: Defined by the Bank of Canada as the All-items index excluding the eight most volatile components (fruit, vegetables, gasoline, fuel oil, natural gas, mortgage interest, inter-city transportation and tobacco products). Also excluded is the effect of changes in indirect taxes on the remaining components.

Consumer Price Index—Terms and Definitions

Base Effect

The 12-month variation in the CPI is calculated by comparing the current month's index with the index for the same month of the previous year. The 12-month change is represented by the difference in the indexes of the reference months. Thus, the 12-month variation can decrease from one month to the next merely because the base serving as the point of comparison increased.

Twelve-Month Percent Changes

Also referred to as “year-over-year”, twelve-month percent changes compare indexes for a given month to indexes for the same month of the previous year. As they compare two points in time, they are influenced by unusual or temporary events that can affect either of the two months. Their calculation does not include any of the intervening monthly indexes.

Source: Statistics Canada

Annual Average Index

Annual average indexes are calculated by averaging index levels over the 12 months of the calendar year. These data should not be confused with the 12-month change in the CPI. By the nature of the calculation, averaging

indexes over the calendar year gives a better representation of price behaviour over the whole year and is closer to the concept of an average price. The use of annual averages is considered the preferred option for indexation purposes.

Source: Statistics Canada

Latest Twelve-Month Average Index

The latest twelve-month average index (ending in the current month) is a 12-month moving average of the indexes of the most recent 12 months. It is calculated like the annual average index. Hence, in theory, the December twelve-month average index would be equal to the annual average index for the calendar year. However, in practice, when BC Stats makes these calculations from published data, the December 12-month average index may differ from Statistics Canada's published annual average index due to rounding.

Harmonized Sales Tax

On July 1, 2010, the Harmonized Sales Tax (HST) came into effect in British Columbia and Ontario. As well, Nova Scotia increased its HST by two percentage points.
