

Consumer Price Index

A release from the Province of British Columbia's central statistical agency

REFERENCE DATE: MAY 2013

CONSUMER PRICE INDEX (2002=100)

HIGHLIGHTS

The Consumer Price Index (CPI) in B.C. fell for the second month in a row in May (-0.6%). Restaurant food prices continued to drop (-4.5%) following the return to the Provincial Sales Tax (PST). Following two months of declines, rising energy prices (+1.0%) served to partially offset price contractions in five major components of the CPI.

Food prices (-0.4%) were down, though grocery prices (+1.5%) rose, with consumers paying more for meat (+1.2%), fresh fruit (+5.4%) and vegetables (+9.9%), and dairy products & eggs (+1.2%). Fish & other seafood (-0.3%) prices fell for the second month in a row.

Shelter costs (-0.9%) continued to fall, as prices associated with owned accommodation (-2.2%) maintained a downward trend, while rented accommodation costs edged up a further 1.2%. Household operations & furnishings (+0.6%) prices were propelled higher by costs related to communications (+2.1%), household chemical products (+2.4%), and furnishings (+0.4%), while household appliance prices dropped 1.5%.

Clothing and footwear prices were unchanged in May, a result of clothing (-1.2%) and footwear (+1.2%) prices moving in opposite directions. Health and personal care

costs took a dip (-1.8%), driven by lower medicinal and pharmaceutical prices (-5.6%).

Following two months of declines, transportation costs in B.C. increased 0.1% compared to May 2012, with gas (+1.4%) and public transportation (+0.2%) prices both on the rise. Intercity transportation (-0.8%) costs fell for the fifth straight month. Recreation, education, & reading (-1.8%) prices dropped, as recreation (-5.8%) and home entertainment equipment (-10.3%) costs contracted. Meanwhile, consumers continued to pay more for education & reading (+1.2%).

*

Nationwide, the inflation rate was 0.7%. Alberta (+2.3%) saw the highest year-over-year increase in consumer prices, followed by Manitoba (+1.8%). New Brunswick (-0.1%) was the only province apart from B.C. (-0.6%) to record a dip in the CPI. Within B.C., prices fell at a slightly faster pace in Victoria (-0.9%) than in Vancouver (-0.4%).

Note: Statistics Canada will release the June Consumer Price Index on July 19, 2013.

Consumer Price Index – continued...

2002=100	All-Items Index	% Change from	
		April 2013	May 2012
Canada	123.0	0.2	0.7
BC	117.9	0.6	-0.6
Vancouver	119.3	0.7	-0.4
Victoria	116.5	0.6	-0.9
Core Canada ¹	121.2	0.2	1.1
BC (excluding energy)	114.8	0.4	-0.6

¹ The Core CPI for Canada: Defined by the Bank of Canada as the All-items index excluding the eight most volatile components (fruit, vegetables, gasoline, fuel oil, natural gas, mortgage interest, inter-city transportation and tobacco products). Also excluded is the effect of changes in indirect taxes on the remaining components.

BC AND CANADA INFLATION TREND

(% change, same month of previous year)

2002=100	Latest 12-month Average Index (ending in May 2013)	Latest 12-month Average % Change	2012 Annual Average % Change
Canada	122.1	1.0	1.5
BC	117.8	0.5	1.1
Vancouver	119.2	0.7	1.3
Victoria	116.5	0.2	1.0

TERMS AND DEFINITIONS

BASE EFFECT

The 12-month variation in the CPI is calculated by comparing the current month's index with the index for the same month of the previous year. The 12-month change is represented by the difference in the indexes of the reference months. Thus, the 12-month variation can decrease from one month to the next merely because the base serving as the point of comparison increased.

Source: Statistics Canada

TWELVE-MONTH PERCENT CHANGES

Also referred to as "year-over-year", twelve-month percent changes compare indexes for a given month to indexes for the same month of the previous year. As they compare two points in time, they are influenced by unusual or temporary events that can affect either of the two months. Their calculation does not include any of the intervening monthly indexes.

Source: Statistics Canada

ANNUAL AVERAGE INDEX

Annual average indexes are calculated by averaging index levels over the 12 months of the calendar year. These data should not be confused with the 12-month change in the CPI. By the nature of the calculation, averaging indexes over the calendar year gives a better representation of price behaviour over the whole year and is closer to the concept of an average price. The use of annual averages is considered the preferred option for indexation purposes.

Source: Statistics Canada

LATEST TWELVE-MONTH AVERAGE INDEX

The latest twelve-month average index (ending in the current month) is a 12-month moving average of the

indexes of the most recent 12 months. It is calculated like the annual average index. Hence, in theory, the December twelve-month average index would be equal to the annual average index for the calendar year. However, in practice, when BC Stats makes these calculations from published data, the December 12-month average index may differ from Statistics Canada's published annual average index due to rounding.

HARMONIZED SALES TAX

On July 1, 2010, the Harmonized Sales Tax (HST) came into effect in British Columbia and Ontario. As well, Nova Scotia increased its HST by two percentage points.
