

Consumer Price Index

A release from the Province of British Columbia's central statistical agency

REFERENCE DATE: AUGUST 2013

CONSUMER PRICE INDEX (2002=100)

HIGHLIGHTS

Consumer prices in the province inched down (-0.1%, year over year) in August, marking the fifth straight month in which the overall price level has either declined or been flat. The recent downward trend in the Consumer Price Index (CPI) is partly related to the elimination of the Harmonized Sales Tax, which resulted in a reduction in the cost of services used by consumers, but it also reflects other factors that are helping to keep a lid on inflation in the province.

A 4.0% decline in the cost of restaurant meals kept food prices relatively stable (-0.3%) even though the cost of food purchased from stores rose 1.4%. Shelter costs continued to slide (-0.6%), largely because the cost of owned accommodation (-2.0%) remained on a downward path. This helped offset the effect of rising prices for rented accommodation (+1.3%) and utilities (+2.8%).

Prices at the pump were up sharply (+5.5%), as was the cost of intercity transportation (+5.7%), driving up the overall cost of transportation services (+2.0%).

Consumers paid more for clothing & footwear (+1.6%) and alcoholic beverages & tobacco (+0.2%), but the cost of health & personal care services (-3.3%), recreation, education & reading material (-0.5%) and household

operations & furnishings (-0.4%) was lower than in August 2012.

Prices in Vancouver were virtually unchanged (+0.1%) in August. In Victoria, the CPI was down (-0.3%) for a fifth straight month.

*

British Columbia was the only province to see a decline in the overall price level in August. The Canadian inflation rate was 1.1%, with rates in other provinces ranging from 0.8% in Quebec to 2.7% in Manitoba. Manitoba's sales tax rate increased to 8% in July, contributing to higher consumer prices in that province.

Note: Statistics Canada will release the July Consumer Price Index on October 18, 2013.

Vancouver	119.1	0.3	1.3
Victoria	116.4	-0.2	1.0

TERMS AND DEFINITIONS

BASE EFFECT

The 12-month variation in the CPI is calculated by comparing the current month's index with the index for the same month of the previous year. The 12-month change is represented by the difference in the indexes of the reference months. Thus, the 12-month variation can decrease from one month to the next merely because the base serving as the point of comparison increased.

Source: Statistics Canada

TWELVE-MONTH PERCENT CHANGES

Also referred to as "year-over-year", twelve-month percent changes compare indexes for a given month to indexes for the same month of the previous year. As they compare two points in time, they are influenced by unusual or temporary events that can affect either of the two months. Their calculation does not include any of the intervening monthly indexes.

Source: Statistics Canada

ANNUAL AVERAGE INDEX

Annual average indexes are calculated by averaging index levels over the 12 months of the calendar year. These data should not be confused with the 12-month change in the CPI. By the nature of the calculation, averaging indexes over the calendar year gives a better representation of price behaviour over the whole year and is closer to the concept of an average price. The use of annual averages is considered the preferred option for indexation purposes.

Source: Statistics Canada

LATEST TWELVE-MONTH AVERAGE INDEX

The latest twelve-month average index (ending in the current month) is a 12-month moving average of the

Consumer Price Index – continued...

indexes of the most recent 12 months. It is calculated like the annual average index. Hence, in theory, the December twelve-month average index would be equal to the annual average index for the calendar year. However, in practice, when BC Stats makes these calculations from published data, the December 12-month average index may differ from Statistics Canada's published annual average index due to rounding.

HARMONIZED SALES TAX

On July 1, 2010, the Harmonized Sales Tax (HST) came into effect in British Columbia and Ontario. As well, Nova Scotia increased its HST by two percentage points.

On April 1, 2013, the Harmonized Sales Tax came into effect in Prince Edward Island, while British Columbia returned to the Provincial Sales Tax and the Goods and Services Tax.
