

# Consumer Price Index

*A release from the Province of British Columbia's central statistical agency*

## REFERENCE DATE: SEPTEMBER 2013

---

### CONSUMER PRICE INDEX (2002=100)

#### HIGHLIGHTS

British Columbia's consumer price index (CPI) was unchanged in September (relative to the same month of 2012). Consumer prices, which include sales taxes, declined immediately after the elimination of the HST on April 1st, but have remained virtually unchanged from 2012 levels since July.

Shelter and energy costs continued to move in opposite directions. The cost of shelter declined (-0.5%) in September, largely due to a 1.8% reduction in the cost of owned accommodation. The index for owned accommodation has been falling since October 2011.

Energy prices exerted upward pressure on the overall price level, rising 2.8% in September. Excluding the cost of energy, prices were 0.3% lower than in the same month of 2012.

The cost of health & personal care (-2.2%), household operations (-0.9%) and recreation, education & reading materials (-0.5%) fell in September. At the same time, consumers paid more for clothing & footwear (+1.4%), transportation (+1.4%), and alcoholic beverages & tobacco (+0.9%). The increase in the transportation price index occurred as gasoline prices climbed 3.2%, while consumers paid 2.7% more for public transportation. However, taxi

fares (-4.6%) were lower than in September 2012.

Food prices were unchanged in September. Although consumers paid more (+1.9%) for their groceries, especially fresh vegetables (+13.4%) and fruits (+11.8%), the cost of restaurant meals (-4.0%) was lower than in September 2012.

Prices in Victoria continued to fall in September, and were 0.3% lower than in the same month of 2012, marking the sixth straight decline in the city's CPI. In Vancouver, prices have been climbing since July, and were up 0.3% in September.

\*

In the rest of the country, annual inflation rates ranged from +0.7% in New Brunswick to +2.5% in Manitoba, where an increase in the provincial sales tax rate has created some inflationary pressure in recent months. The Canadian inflation rate was 1.1%.

*Note: Statistics Canada will release the July Consumer Price Index on November 22, 2013.*

2002=100	All-Items Index	% Change from	
		August 2013	September 2012
	September 2013		
Canada	123.3	0.2	1.1
BC	118.1	0.1	0.0
Vancouver	119.6	0.1	0.3
Victoria	116.5	0.0	-0.3
Core Canada <sup>1</sup>	121.4	0.2	1.3
BC (excluding energy)	115.0	0.1	-0.3

<sup>1</sup> The Core CPI for Canada: Defined by the Bank of Canada as the All-items index excluding the eight most volatile components (fruit, vegetables, gasoline, fuel oil, natural gas, mortgage interest, inter-city transportation and tobacco products). Also excluded is the effect of changes in indirect taxes on the remaining components.

## BC AND CANADA INFLATION TREND

(% change, same month of previous year)

2002=100	Latest 12-month Average Index (ending in September 2013)	Latest 12-month Average % Change	2012 Annual Average % Change
Canada	122.5	0.9	1.5
BC	117.8	0.1	1.1
Vancouver	119.2	0.2	1.3
Victoria	116.4	-0.2	1.0

## TERMS AND DEFINITIONS

### BASE EFFECT

The 12-month variation in the CPI is calculated by comparing the current month's index with the index for the same month of the previous year. The 12-month change is represented by the difference in the indexes of the reference months. Thus, the 12-month variation can decrease from one month to the next merely because the base serving as the point of comparison increased.

*Source: Statistics Canada*

### TWELVE-MONTH PERCENT CHANGES

Also referred to as "year-over-year", twelve-month percent changes compare indexes for a given month to indexes for the same month of the previous year. As they compare two points in time, they are influenced by unusual or temporary events that can affect either of the two months. Their calculation does not include any of the intervening monthly indexes.

*Source: Statistics Canada*

### ANNUAL AVERAGE INDEX

Annual average indexes are calculated by averaging index levels over the 12 months of the calendar year. These data should not be confused with the 12-month change in the CPI. By the nature of the calculation, averaging indexes over the calendar year gives a better representation of price behaviour over the whole year and is closer to the concept of an average price. The use of annual averages is considered the preferred option for indexation purposes.

*Source: Statistics Canada*

### LATEST TWELVE-MONTH AVERAGE INDEX

The latest twelve-month average index (ending in the current month) is a 12-month moving average of the

## Consumer Price Index – continued...

indexes of the most recent 12 months. It is calculated like the annual average index. Hence, in theory, the December twelve-month average index would be equal to the annual average index for the calendar year. However, in practice, when BC Stats makes these calculations from published data, the December 12-month average index may differ from Statistics Canada's published annual average index due to rounding.

*Source: Statistics Canada*

### HARMONIZED SALES TAX

On July 1, 2010, the Harmonized Sales Tax (HST) came into effect in British Columbia and Ontario. As well, Nova Scotia increased its HST by two percentage points.

On April 1, 2013, the Harmonized Sales Tax came into effect in Prince Edward Island, while British Columbia returned to the Provincial Sales Tax and the Goods and Services Tax.
