

Consumer Price Index

A release from the Province of British Columbia's central statistical agency

REFERENCE DATE: JUNE 2015

CONSUMER PRICE INDEX (2002=100)

HIGHLIGHTS

British Columbia's consumer price index (CPI) climbed 0.8% (*unadjusted*) in June, compared to the same month of the previous year. June's rate of annual inflation was unchanged from the same measure reported for May (+0.8%).

According to Statistics Canada, the overall annual inflation rate of 0.8% increased to 1.5% when energy was excluded from the index, and declined to 0.2% when food was excluded from the index.

Relative to June 2014, food prices rose by 3.9%, as the cost of both groceries purchased from stores (+4.7%) and meals purchased from restaurants (+2.3%) increased. The increase in grocery prices was mainly due to a rise in the cost of fresh vegetables (+10.9%), meat (+8.1%), and fruit, fruit preparation, and nuts (+4.3%). In contrast, the price of non-alcoholic beverages declined during the same time period (-3.7%).

The cost of shelter (-0.5%) declined in June, with costs for renters increasing (+1.0%) while the cost of owned accommodations edged down (-0.7%). Within the shelter category, the cost of electricity increased (+5.7%) since June 2014, while the price of piped gas (-18.1%) and fuel oil and other fuel decreased (-16.3%).

Compared to last year, the transportation index (-1.5%) declined due to a decrease in the cost of private

transportation (-1.7%). On the other hand, there was a slight increase in the cost of public transportation (+0.5%). Although the price of gas declined in June relative to June of last year (-11.6%), there was an increase of 2.4% in prices compared to May of this year.

The overall cost of clothing & footwear declined 0.1% over the twelve months ending in June, driven by decreases in prices of women's clothing (-2.6%) and men's clothing (-0.3%).

Compared to a year ago, consumers paid more for household operations and furnishings (+1.9%), recreation, education & reading (+2.2%), alcoholic beverages and tobacco products (+1.4%), and health & personal care (+0.9%).

Consumer prices rose in both Vancouver (+0.8%) and Victoria (+0.9%) in June compared to June 2014, both very close to the rate of inflation for the province of British Columbia as a whole.

Compared to June 2014, Canada's CPI rose 1.0% (*unadjusted*). Inflation rates ranged from a high of 1.9% in Saskatchewan, to a low of -0.1% in Prince Edward Island. Prices increased in all provinces except Prince Edward Island.

Note: Statistics Canada will release the July Consumer Price Index data on August 21, 2015.

BC	119.4	1.0	1.0
Vancouver	121.0	1.1	1.1
Victoria	117.8	1.0	0.9

TERMS AND DEFINITIONS

BASE EFFECT

The 12-month variation in the CPI is calculated by comparing the current month's index with the index for the same month of the previous year. The 12-month change is represented by the difference in the indexes of the reference months. Thus, the 12-month variation can decrease from one month to the next merely because the base serving as the point of comparison increased.

Source: Statistics Canada

TWELVE-MONTH PERCENT CHANGES

Also referred to as "year-over-year", twelve-month percent changes compare indexes for a given month to indexes for the same month of the previous year. As they compare two points in time, they are influenced by unusual or temporary events that can affect either of the two months. Their calculation does not include any of the intervening monthly indexes.

Source: Statistics Canada

ANNUAL AVERAGE INDEX

Annual average indexes are calculated by averaging index levels over the 12 months of the calendar year. These data should not be confused with the 12-month change in the CPI. By the nature of the calculation, averaging indexes over the calendar year gives a better representation of price behaviour over the whole year and is closer to the concept of an average price. The use of annual averages is considered the preferred option for indexation purposes.

Source: Statistics Canada

LATEST TWELVE-MONTH AVERAGE INDEX

The latest twelve-month average index (ending in the current month) is a 12-month moving average of the indexes of the most recent 12 months. It is calculated

Consumer Price Index – continued...

like the annual average index. Hence, in theory, the December twelve-month average index would be equal to the annual average index for the calendar year. However, in practice, when BC Stats makes these calculations from published data, the December 12-month average index may differ from Statistics Canada's published annual average index due to rounding.

HARMONIZED SALES TAX

On July 1, 2010, the Harmonized Sales Tax (HST) came into effect in British Columbia and Ontario. As well, Nova Scotia increased its HST by two percentage points.

On April 1, 2013, the Harmonized Sales Tax came into effect in Prince Edward Island, while British Columbia returned to the Provincial Sales Tax and the Goods and Services Tax.
