

Consumer Price Index

Reference date: October 2016

Released: November 18, 2016

Consumer Price Index (2002=100)

Highlights

British Columbia's consumer price index (CPI) climbed 2.1% (*unadjusted*) in October, compared to the same month of the previous year. This marks an increase in the year-over-year rate of inflation since September, when it was 1.8%.

According to Statistics Canada, the overall annual inflation rate of 2.1% went down to 1.9% when energy is excluded from the index, and increases to 2.6% when food is excluded instead.

The overall cost of food decreased slightly (-0.8%) since October of last year. The cost of groceries purchased from stores decreased (-2.6%), while the cost of meals purchased from restaurants increased (+2.9%) during the same time period. Within the food category, the largest drop in prices were observed for fresh vegetables (-7.3%), fresh fruit (-6.0%), and meat (-3.7%), while fish and other seafood (+8.1%) was the only group to experience a rise in prices compared to October of last year.

The cost of shelter (+2.1%) went up in October, with costs for both renters (+1.1%) and home owners (+2.7%) rising. Within the shelter category, the cost of both electricity (+3.9%) and fuel oil and other fuel (+2.0%) increased, while the price of piped gas (-5.0%) fell since October 2015.

The transportation index (+4.5%) increased since October of last year, with the cost of both private

transportation (+4.7%) and public transportation (+3.0%) going up. Within the private transportation category, the cost of operating a motor vehicle rose (+5.2%), which includes a large increase in gasoline prices (+7.2%). This marks the second month in a row in which the cost of gasoline increased on a year-over-year basis after months of price declines.

The overall cost of clothing and footwear decreased (-0.8%) in October, with the cost of both clothing (-1.2%) and footwear (-1.8%) going down.

Compared to a year ago, consumers paid more for alcoholic beverages and tobacco products (+3.5%), recreation, education and reading (+3.1%), health and personal care (+2.4%), and household operations and furnishings (+2.3%). Within these categories, some items with significant increases include reading material and printed matter (+10.7%) and alcoholic beverages purchased from stores (+5.3%).

Consumer prices rose in Vancouver (+2.5%) in October, above the rate of inflation for British Columbia as a whole, while in Victoria the increase in prices (+1.9%) was slightly lower than B.C. as a whole.

Canada's CPI rose 1.5% (*unadjusted*) in October. Provincial inflation rates ranged from a high of 4.0% in Newfoundland and Labrador, to a low of 0.5% in Alberta. The rate of inflation in B.C. ranks joint-third highest amongst the provinces (tied with Ontario).

Note: Statistics Canada will release the November Consumer Price Index on December 22, 2016.

2002=100	All-Items Index October 2016	% Change from	
		September 2016	October 2015
Canada	129.1	0.2	1.5
BC	123.1	-0.1	2.1
Vancouver	125.4	0.0	2.5
Victoria	121.3	-0.2	1.9
Core Canada ¹	129.1	0.2	1.7
BC (excluding energy)	120.7	-0.2	1.9

¹ The Core CPI for Canada: Defined by the Bank of Canada as the All-items index excluding the eight most volatile components (fruit, vegetables, gasoline, fuel oil, natural gas, mortgage interest, inter-city transportation and tobacco products). Also excluded is the effect of changes in indirect taxes on the remaining components.

BC and Canada Inflation Trend

(% change, same month of previous year)

2002=100	Latest 12-month Average Index (ending in October 2016)	Latest 12-month Average % Change	2015 Annual Average % Change
Canada	128.1	1.5	1.1
BC	122.1	1.9	1.1
Vancouver	124.2	2.2	1.2
Victoria	120.4	1.7	1.1

Terms and definitions

Base effect

The 12-month variation in the CPI is calculated by comparing the current month's index with the index for the same month of the previous year. The 12-month change is represented by the difference in the indexes of the reference months. Thus, the 12-month variation can decrease from one month to the next merely because the base serving as the point of comparison increased.

Twelve-Month Percent Changes

Also referred to as "year-over-year", twelve-month percent changes compare indexes for a given month to indexes for the same month of the previous year. As they compare two points in time, they are influenced by unusual or temporary events that can affect either of the two months. Their calculation does not include any of the intervening monthly indexes.

Source: Statistics Canada

Annual Average Index

Annual average indexes are calculated by averaging index levels over the 12 months of the calendar year. These data should not be confused with the 12-month change in the CPI. By the nature of the calculation, averaging indexes over the calendar year gives a better representation of price behaviour over the whole year and is closer to the concept of an average price. The use of annual averages is considered the preferred option for indexation purposes.

Source: Statistics Canada

Latest Twelve-Month Average Index

The latest twelve-month average index (ending in the current month) is a 12-month moving average of the indexes of the most recent 12 months. It is calculated like the annual average index. Hence, in theory, the December twelve-month average index would be equal to the annual average index for the calendar year. However, in practice, when BC Stats makes these calculations from published data, the December 12-month average index may differ from Statistics Canada's published annual average index due to rounding.

Harmonized Sales Tax

On July 1, 2010, the Harmonized Sales Tax (HST) came into effect in British Columbia and Ontario. As well, Nova Scotia increased its HST by two percentage points.

On April 1, 2013, the Harmonized Sales Tax came into effect in Prince Edward Island, while British Columbia returned to the Provincial Sales Tax and the Goods and Services Tax.
