

This report summarizes all unintentional illicit drug overdose deaths in British Columbia (accidental and undetermined) that occurred between January 1, 2009, and January 31, 2019, inclusive. It includes confirmed and suspected illicit overdose deaths. *Please note that data is subject to change as investigations are concluded.*¹

Inclusion Criteria: The illicit drug overdose category includes the following:

- Street drugs (Controlled and illegal drugs: heroin, cocaine, MDMA, methamphetamine, illicit fentanyl etc.).
- Medications not prescribed to the decedent but obtained/purchased on the street, from unknown means or where origin of drug not known.
- Combinations of the above with prescribed medications.

2019 January Summary

- There were 90 suspected drug overdose deaths in January 2019. This is an 31% decrease over the number of deaths occurring in January 2018 (130) and a 22% decrease over the number of deaths occurring in December 2018 (116).
- The number of illicit drug overdose deaths in 2019 equates to about 2.9 deaths per day for the year.
- In 2019, 76% of those dying were aged 30 to 59; individuals aged 19-59 have accounted for 88% of illicit drug overdose deaths. Males accounted for 83% of all suspected illicit drug overdose deaths over the same period.
- The three townships experiencing the highest number of illicit drug overdoses in 2018 are Vancouver, Surrey, and Victoria.
- Vancouver Coastal and Fraser Health Authority have had the highest *number* of illicit drug overdose deaths (29 and 27 deaths, respectively) in 2019, making up 62% of all illicit drug overdose deaths during this period.
- Vancouver Coastal Health Authority has the highest *rate* of illicit drug overdose deaths (37 deaths per 100,000 individuals) followed by Northern Health Authority (32 deaths per 100,000 individuals) in 2018. Overall, the rate of illicit drug overdose deaths in BC was 31 deaths per 100,000 individuals in 2018.
- Rates of illicit drug overdose deaths are highest in Vancouver, Northern Interior, Thompson Cariboo, Okanagan, and Fraser South Health Services Delivery Areas in 2018.
- In 2019, 88% of fatal illicit drug overdoses occurred inside (62% in private residences and 26% in other residences including social and supportive housing, SROs, shelters, and hotels) and 11% occurred outside in vehicles, sidewalks, streets, parks, etc.
- In Vancouver Coastal, other residences (47%) were the most common place of fatal overdose followed by private residences (38%) between 2017 and 2019.
- There were no deaths at supervised consumption or drug overdose prevention sites.²
- Note: 2019 data is only for the month of January. Due to the short time frame, number and percentages should be interpreted with caution and are subject to change as investigations are completed.

- This figure illustrates the comparison of illicit drug overdose deaths to other common causes of unnatural deaths from 2010 to 2018.

*Prescription drug overdose deaths (accidental and undetermined) include cases where only a prescription drug is involved and reported for closed investigations only to 2016.

*Includes overdose deaths on July 1, 2018 which falls on the Sunday after income assistance payment date (June 27, 2018). [†]Does not include July 1, 2018.

- More fatal overdoses occurred during the days following income assistance payment (Wed-Sun) than all other days in 2018. Income assistance payment dates can be found at <https://www2.gov.bc.ca/gov/content/family-social-supports/income-assistance/payment-dates>.

Type of Drugs:

- Preliminary data suggests that the proportion of illicit drug overdose deaths for which illicit fentanyl was detected (alone or in combination with other drugs) was approximately 82% in 2017 and 87% in 2018.
- Carfentanil has been detected in 35 suspected illicit drug overdose deaths in 2018 and 71 deaths in Jun-Dec 2017. In January 2019, carfentanil has been detected in 13 overdose deaths. *Note this is subject to change as further toxicology results are received.*
- Illicit fentanyl-detected deaths appear to account for the increase in illicit drug overdose deaths since 2012 as the number of illicit drug overdose deaths excluding fentanyl-detected has remained relatively stable since 2011 (average of 285 deaths per year). *This data is subject to change as further analogue testing results become available.*

Figure 2: Illicit Drug Overdose Deaths including and excluding Fentanyl, 2009-2018

- A review of completed cases from 2016-18 indicates that the top four detected drugs relevant to illicit drug overdose deaths were fentanyl (80%), cocaine (50%), methamphetamine/amphetamine (31%), and heroin (20%).

Notes:

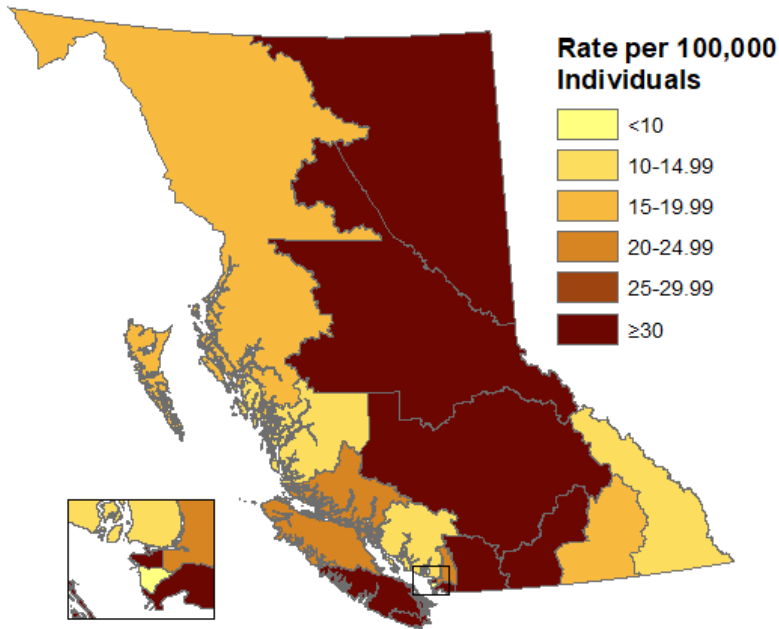

1. The BCCS operates in a live database environment. Some data for more recent years is based on preliminary circumstances and is subject to change as investigations are concluded. Data are not directly comparable to published counts from previous years.
2. This does not include circumstances where injury may have occurred at an overdose prevention site and death later occurred in hospital.
3. 2019 data includes January 1, 2019 to January 31, 2019.
4. Date of death was used in tables where date of injury was unknown.
